Dear Dr. Ponwith,

During its October 2013 and January 2014 meetings, the Southeast Data, Assessment, and Review (SEDAR) Steering Committee discussed introducing a new methodology for conducting benchmark Assessment Workshops. This new methodology would employ an approach similar to that used for the fishery management plan amendment process, where an Interdisciplinary Planning Team (IPT) convenes behind-the-scenes to develop and edit documents under the publicly administered guidance of the Council. The SEDAR Steering Committee discussed this idea under the same premise, whereby the analytical team would be given additional autonomy to conduct the more technical aspects of the assessment process by conversing as-needed with other members of the Assessment Workshop Panel, with all work reviewed publicly during Federal Register-noticed webinars prior to submittal to the Review Workshop.

The Gulf of Mexico Fishery Management Council (Council) fully supports this proposed improvement to the process, as both the Council and its Scientific and Statistical Committee have often objected to holding Assessment Workshops solely via webinars. The Council anticipates improvements in assessment quality and throughput by transitioning to this IPT-style approach, and requests that the SEDAR Steering Committee make this transition a top priority.

If you have any questions about this request, or if there are ways in which the Gulf Council can assist in expediting formally introducing the IPT-style approach, please contact the Gulf Council.

Sincerely,

Dear Dr. Ponwith:

During its August 2014 meeting in Biloxi, Mississippi, the Gulf of Mexico Fishery Management Council (Council) made a motion to recommend that the Southeast Data, Assessment, and Review (SEDAR) Steering Committee change the slot in 2016 currently scheduled for red drum to a data poor assessment, which will include red drum and other high priority species as designated by the Council:

Motion: To recommend that the SEDAR Steering Committee change the slot in 2016 currently scheduled for red drum to a data poor assessment, which will include red drum and other high priority species as designated by the Council.

Motion carried with no opposition.

The Council is aware of ongoing research on red drum in the Gulf of Mexico, but acknowledges that assessing red drum in tandem with other data-limited species may prove to be a better application of limited analytical capabilities.

If you have any questions about this recommendation, please contact us.

Sincerely,

A handwritten signature in dark ink, appearing to read "Doug Gregory".
