/// INPUT DATA FILE FOR PROGRAM SSASPM
///
/// Important notes:
/// (1) Comments may be placed BEFORE or AFTER any line of data,
however they MUST begin
/// with a # symbol in the first column.
/// (2) No comments of any kind may appear on the same line as the
data (the #
/// symbol will not save you here)
/// (3) Blank lines without a # symbol are not allowed.

#####
# GENERAL INFORMATION--bonnethead
#####
# first and last year of data
1950 2011
# number of years of historical period
22
# number of years to project
0
# starting value for pup survival (allows model to start away from mode;
enter 0 to start at best_guess in .prm file)
0
# first and last age of data
1 18
# number of seasons (months) per year
12
# type of overall variance parameter (1 = log scale variance, 2 =
observation scale variance, 0=force equal weighting)
1
# pupping season (integer representing season/month of year when spawning
occurs)
8
# maturity schedule (fraction of each age class that is sexually mature)
0.069 0.131 0.236 0.388 0.565 0.726 0.844 0.917 0.958 0.979 0.990 0.995
    0.997 0.999 0.999 1.000 1.000 1.000
# fecundity schedule (index of per capita fecundity of each age class)
