

### *Marine Information System*

- To conserve and manage Florida's marine Fisheries
- Established by Florida Statute (F.S.) Chapter 370 in 1983
- Requires wholesale dealers to report each purchase of saltwater products from licensed commercial fishers
- Requires wholesale and retail dealers who produce (i.e., catch) saltwater products themselves to report amounts produced
- Monthly reporting required (weekly for quota-managed species)
- F.S. 370.07(6)(a) and Florida Administrative Code (FAC) 68E-5 specifies that records are to be kept by the dealers, the contents of these records, and reporting requirements

### *Marine Fisheries Trip Ticket*

- Trip tickets are used to quantify commercial landings (pounds and value) of fish and shellfish. Annually, about 110 million pounds worth an estimated \$190 million are reported on approximately 260,000 trip tickets.
- Provides resource managers with a measure of fishing effort (trips) and trends in fisheries
- Allows comparison of trip information (e.g., which species are caught, gears used on trips, participants in a fishery, levels of landings from trips).
- Provides fishers with a record of sales of fish and invertebrates, and participation in fisheries
- Four types of tickets: FWC issued, other approved dealer forms, oyster tally sheets, and digital records (see Attachments A1, A2)

### Trip ticket data collected

- From 1985-1989, the marine fisheries trip ticket required the following information: Saltwater Products License (SPL; fisher license), dealer license, unloading date, time fished (usually time away from dock), county landed (where product came ashore), number of sets (nets, long lines), traps pulled (trap fisheries), soak time, species code, and amount of catch (usually in pounds). Area fished, depth, unit price, and dollar value were on the ticket, but were not yet mandatory.
- Beginning in 1990, gear fished (mandatory) and size code fields were added, and imprinters were required for recording SPL numbers. In January of 1995, area fished, depth, unit price and dollar value became mandatory fields. The gear data were expanded in June of 1997 to include recreational caught catch from head boat, guide, and charter boats that would be sold to licensed dealers. Though not required, data regarding aquaculture could be included as well. In November of 2000, trip start date, number of crew, state landed, grade and disposition of catch were added to keep in line with the minimum data requirements of the Atlantic Coastal Cooperative Statistics Program (ACCSP). This is the latest version of the Florida trip ticket (see Attachment B).

### Tracking of trip tickets

- Trip tickets (in duplicate) are received by mail at FMRI St. Petersburg
- The FWC copies are separated, scanned for completeness, minor corrections made (dealers contacted when necessary), counted, banded, and entered into a computerized tracking system by date received
- Paper records (one copy) are sent to keypunch contractor
- Compliance with reporting deadlines evaluated, notices sent to late-reporting dealers
- New dealers sent questionnaires to determine need to report, necessary materials (trip tickets, postage-paid envelopes, posters and code lists {see additional attachments}, imprinters, etc.) sent to reporting dealers.

### Editing of trip tickets

- Computerized data are edited using profiles of acceptable data for each field and for some combinations of fields. Examples of editing are range checks of each field, validity of license information, comparison of dealer and invoice numbers of tickets returned, number of gears used, area fished by species, county landed by species, depth by species, gear by species, gear quantity by gear, number of sets by gear, soak time by gear, size by species, amount of catch by species, and price by species.
- Corrections made to records (dealers contacted when necessary)
- Finalized records placed in a 'master' database at FMRI
- Beginning in 2000, all previously edited data and edit processes were converted from an ADABAS mainframe system to relational databases in Oracle. Comprehensive testing and analyses were performed to ensure a complete transition with no loss or corruption of data.

### Trip ticket data uses

- Data are confidential under F.S. 370.07 and are exempt for Open Records Statutes (F.S. 119)
- Aggregate summaries are produced periodically throughout the year
- Requests for trip ticket information at various levels of summarization are received from many state, local, federal agencies, fishing groups, individuals, Commission staff, resource managers, and other interested persons
- Example uses of these data include examining management options, evaluation of quotas, and obtaining state and federal fishing permits
- Recent uses of these data were the allocation of stone crab trap certificates to qualified fishers, the qualification for federal South Atlantic rock shrimp fishing permits, and compensation to qualifying fishers for shrimp disaster relief

### Accuracy and potential problems

- Data are as accurate as reported by the dealers (the FWC conducts audits on a limited scale to examine reporting by dealers. Also, some trip level data is received by our port samplers and compared to data received by dealers. Additional information is received from fishermen who have found discrepancies between their records and the FWC's).

- License information is used to link trip ticket data to fishers (occasionally, SEDAR7-DW-39 information is inaccurate).
- Some information (even if mandatory) may be missing on tickets
- Some information may be reported late
- Fishers may possess more than one SPL, more than one boat, may license differently in different years, may skip a year or two, sell or buy a vessel, etc. Also, a fisher can be licensed as an individual, or a vessel, or both.
- Policy decisions may be needed to implement programs utilizing trip ticket data
- Corrections to the database may be needed
