

Georgia Red Snapper Headboat Discard Lengths, 2010-2013

SEDAR 73 Data Workshop

Dawn Franco

Data available and justification for use

- SEDAR 41 – only 517 trips with measurements for HB discards from 2005 to 2014
- Capt. Amick has over 1,300 lengths recorded from 228 trips from 2010 to 2013
- Number of fish discarded per trip from 1983 to 2013 by category (<20 inches alive or dead) are also available.
- Not documented as a considered discard length source in SEDAR 41. The discard length data was not specifically highlighted in the working paper SEDAR41-DW01 so it is possible it was simply overlooked as an additional source of discard length data.
- This data could be used to supplement the headboat discard lengths.
- Depth = 90-120 ft (27-37m)
