2021

The Virginia Game Fish Tagging Program (VGFTP) started in 1995 primarily funded from Virginia saltwater fishing license funds and matching funds from VIMS.

The program began in the 1980's when Mr. Claude Bain, III, former director of the Virginia Saltwater Fishing Tournament (VSFT) under the Virginia Marine Resources Commission (VMRC) approached Mr. Jon Lucy at the Virginia Institute of Marine Science (VIMS) about developing a tagging project on red drum.

Bain and Lucy realized not only were critical habitat and seasonal movement data limited for red drum in state waters, a similar situation existed for a number of other marine recreational species like black drum, cobia, speckled trout, and tautog. As a result, they decided to explore developing a multi-species, angler-assisted tagging program.

The program has changed and grown over the years, and at the VMRC, Lewis Gillingham is the current VMRC Virginia Saltwater Fishing Tournament (VSFT) Director and manages the VMRC portion of the tagging program. Ann Burnett, also of the VSFT, deserves special recognition for dedication to the program, as she has more experience than any other staff member with the project (having been there from the start!). Her consistent work, data management and guidance keep the program on track. Also from the VMRC, Mr. Todd Sperling, takes the VGFTP to new levels with evolving web-based platforms and query options for the VGFTP database program database.

Ms. Susanna Musick, in the Marine Advisory Program at the Virginia Institute of Marine Science, is the Principal Investigator for the tagging program and coordinates VGFTP training, data analysis and preparation, and reporting. Also at VIMS, Dave Ferree provides support for the tagging program by assisting with workshop preparation, data entry for our most prolific taggers, and coordinating tag purchases. Ms. Cheryl Teagle helps to manage the tagging program budget. VIMS Publications provides critical assistance in the preparation of posters and annual reports. Ms. Susan Stein in the VIMS' Publications Center handles the printing production of annual reports. The VGFTP is a team effort by many critical players, especially the anglers who devote significant time and effort to tagging target fish and reporting fish recaptures.

VIRGINIA GAME FISH TAGGING PROGRAM 2021

Introduction

Through 2021, the Virginia Game Fish Tagging Program (VGFTP) has maintained a 26-year database of records for tagged and recaptured fish. The program is a cooperative project of the Virginia Saltwater Fishing Tournament (VSFT) under the Virginia Marine Resources Commission (VMRC) and the Virginia Institute of Marine Science (VIMS) of William & Mary (under the VIMS Marine Advisory Program).

The main goal of the program is to train and maintain an experienced group of anglers who volunteer their time to properly tag and release fishes. Data on tagged and recaptured fish are summarized in annual reports and are accessible on VIMS website: <http://www.vims.edu/vgftp/>. Time series data are organized and provided when requested by anglers, angling groups, researchers, and fishery managers.

Program participants are trained to tag only designated target species in Virginia waters. Participation in the program is capped at two hundred trained taggers. Supporting this number of taggers has been manageable when meeting tag and tagging equipment needs, performing timely data entry, and mailing of tag-recapture reports (and reward items) to anglers reporting catches of tagged fish.

Funding for the program is applied for annually through a competitive proposal process under the VMRC Recreational Fishing Advisory Board. The program funding requires the Board's positive recommendation, which then goes before the VMRC Commissioners for final approval. If funding is approved, Virginia Saltwater Recreational Fishing License Funds (administered by VMRC) primarily cover budget needs, with additional matching funds contributed by VIMS. VIMS provides approximately 50% of matching funds for each proposal and both the VMRC and VIMS provide the majority of annual salary support for program staff each year. In short, the VGFTP provides excellent value.

A cooperative but separate funding proposal from that of the VSFT office is submitted annually to the VMRC by VIMS. The VIMS portion of the program focuses primarily on data analysis, coordination of training and awards, purchasing all tags and tagging equipment (tag guns, tag sticks, tagging needles, and constructing measuring boards). Also included in the VIMS budget are travel costs and costs for presenting program results at fishing clubs and scientific meetings. VIMS also handles several printed materials including tagging training handouts, waterproof tagging data sheets, and laminated posters alerting anglers to target species and the telephone number for reporting recaptured fish. The design, printing and publication of annual reports also falls to VIMS, including data analysis and the publication and maintenance of digital reports on the VIMS website and the updates for the VGFTP Facebook page (@vagamefishtagging).

The VSFT office also submits a separate proposed budget. This budget predominantly covers expenses associated with purchasing reward items for recaptures and mailing such items (with printed Fish Recapture Reports) to people phoning in tagged fish recapture information. Anglers who report tagged fish choose among various reward options including custom T-shirts, caps, sun visors, pewter fish pins, or plastic tackle organizers (as long as such items remain in stock).

Recapture awards encourage diverse members of the public (including commercial fishermen, seafood dealers, etc.) to call in reports of tagged fish they encounter. The reward system and recapture reports provide positive feedback to anglers and encourage them to continue to participate in the program and report future recaptures of tagged fish. Direct association of VGFTP taggers with others in the angling community enhances program awareness, reminds anglers (and commercial fishers) of the importance of reporting

tagged fish, and provides the angling community with positive fishery conservation role models. The program succeeds because of good teamwork across the angling community.

The tagging program documents annual and year-to-year movement and habitat utilization patterns of selected finfish species in Virginia waters. For certain species, the program documents significant coastal migrations. Many of these species spawn in the lower Bay or nearshore waters of Virginia and use Virginia estuarine and coastal waters as nursery and feeding grounds.

The program's results are of interest to the angling community and to fishery researchers and managers. The number and size distribution of fishes tagged each year compliment other research-based data sets and can help fishery managers gain a more comprehensive picture of sizes of fish released in the state's marine recreational fishery.

Tagging effort for flounder, red and black drum, speckled trout, cobia, spadefish, triggerfish and sheepshead primarily occurs in the Bay and nearshore coastal waters. However, tagging of tautog, black sea bass, spadefish and gray triggerfish occurs over much broader areas of the Bay and inshore-offshore waters. Tagging for structure-oriented species occurs on sites such as fishing piers, artificial reefs, the Chesapeake Bay Bridge Tunnel complex, shipwrecks and other bottom sites occurring from the lower Bay to sites offshore of Virginia.

In the past, tagging data from the Yorktown Power Station (York River) and the Center for Energy Conservation Power Station (Elizabeth River) helped to document these important over-wintering sites for various species, especially speckled trout and red drum. Historical tagging effort at these warm water discharge sites through cooperation with Virginia Dominion Power largely came to an end in 2014 due to the lessened utilization those facilities, and that continues to be reflected in VGFTP data.

Target species

Target species for 2021 appear below. Summer flounder replaced gray trout (weakfish) in 2000, the latest change to date.

Black Drum	<i>Pogonias cromis</i>
Black Sea Bass	<i>Centropristis striata</i>
Cobia	<i>Rachycentron canadum</i>
Summer Flounder	<i>Paralichthys dentatus</i>
Red Drum	<i>Sciaenops ocellatus</i>
Sheepshead	<i>Archosargus probatocephalus</i>
Spadefish	<i>Chaetodipterus faber</i>
Speckled Trout	<i>Cynoscion nebulosus</i>
Tautog	<i>Tautoga onitis</i>
(Gray) Triggerfish	<i>Balistes capriscus</i>

Program Objectives

Basic objectives guide program activities. There are five main objectives:

(1) Develop and maintain a quality tagging program using a corps of trained angler taggers; tagging effort of these anglers should be directed to target species, especially where one can take advantage of significant numbers of non-legal fishes which anglers are readily discarding alive while complying with recrea-

tional fishing regulations.

(2) Where and when appropriate, direct program tagging effort toward opportunistic occurrences of strong year classes of fishes in Virginia's Bay and nearshore-offshore waters, especially species not traditionally subject to scientific tagging studies in such waters, i.e., red drum, black drum, speckled trout, tautog, sheepshead, spadefish, etc. The program does not target species already monitored and/or targeted in state waters by research-based tagging studies coordinated by fishery research agencies and institutions, in particular, striped bass.

(3) Maintain a database of tagged and recaptured fish records of use to fishery researchers and managers and the angling community. Make summaries and reports of such data available to the angling community through annual reports, websites, presentations to angling clubs, kids fishing clinics, etc. and provide requested data to researchers and fishery managers.

(4) Use the tagging program to enhance education of marine anglers about the importance of reporting tagged fishes to appropriate organizations, agencies, and research institutions to enhance understanding and management of key fishery stocks important to Virginia's marine recreational fisheries.

(5) Use program results to educate the angling community about fishery conservation and management benefits directly connected with proper handling and releasing of non-legal fishes. Tag-recapture data prove that using proper catch and release fishing practices results in better angling catches both short-term and long-term.

The program maintains a group of experienced, trained, angler-taggers who can capitalize on opportunities to tag key species that often exhibit high abundance levels during a given fishing season. These events contribute to supporting specific fisheries in Virginia's valuable recreational fishery and take on even greater value when this program documents sizes and abundance of recreationally-targeted fish and the habitats they utilize.

Database Management

As in previous years, Mr. Todd Sperling's (VMRC) skills are indispensable for managing the program's data files. Since 2009, data are quarantined whenever a recaptured fish species does not match that of the tagged fish (such records are linked by their specific fish tag number). This feature allows the review of such data inconsistencies, which may be the result of various issues, i.e., recaptured fish tag numbers being misread and thereby reported incorrectly, a recapture angler's mistake regarding the species of tagged fish they caught, etc. Such reporting irregularities seem to occur most frequently at fishing piers and other heavily fished shoreline locations.

Other cases may include "negative days at large" for recaptured fish, i.e., when a tagged fish's reported recapture date is earlier than the reported tagged date. Also, if a recaptured fish's size is significantly different from what would be expected, this may suggest either the person reporting the recapture badly estimated the fish's length, or the recaptured fish's tag number was reported incorrectly, etc.; such issues can then be investigated and hopefully clarified. These recapture data issues more often occur on reports called into the office and left on voice mail outside of regular office hours.

Details of Program Responsibilities

In addition to handling the majority of (non-tagger) recapture data entry, the VSFT office distributes tags, needles, etc. These items are regularly mailed to taggers and records are maintained regarding tag-number series assigned to the participants. This information is important for tracking down late tagged fish data reports for reported recaptures. Similarly, "Fish Recapture Reports" generated from the database are mailed to both the tagger and the angler reporting the recapture (along with the available reward item). This timely feedback loop is critical to the success of the tagging program.

Every tag clearly states that a "REWARD" is offered for reporting recaptures of tagged fishes. Appropriate reward items (program caps, sun visors, t-shirts, fish pins, etc.) are mailed to anglers (and commercial fishers and fish dealers reporting tags) by the VSFT office along with fish Recapture Reports. The most popular reward item is the t-shirt, which must be printed in limited numbers each year to stay within budget. Typically, late in the fishing year the t-shirt supply becomes exhausted. Then other reward items are substituted for it.

Data for both tagged and recaptured fishes are entered into the database maintained on a server at the VMRC. The VMRC database manager is proactive in contributing to the improvement of tagged and recaptured fish data and outputs. Current options include setting up various reports that provide "single-click" data summaries for review and tracking program results.

VIMS continues to serve as a remote site for entering tagged and recaptured fishes data for selected program participants. To relieve some of the workload from the VSFT office, VIMS staff enter all data for the program's most productive tagger, Mr. Ed Shepherd. From 2007-2021, Mr. Shepherd has tagged 2,000-10,000 fish annually, which resulted in 550-1000+ recapture reports each year. At VIMS, tagged fish and recapture data records are also checked for possible inconsistencies and errors; the corrected data are then analyzed and formatted for various presentations and reports. Figures demonstrating fish movement and habitat use patterns are also developed for a variety of educational programs (VIMS Marine Science Day, fishing clubs, and public presentations). Data and graphics are also developed in different formats for various program dissemination needs, i.e. VIMS website pages, annual tagging training workshops, posters, annual reports and presentations (angling clubs, civic groups and scientific meetings). Tag and program equipment orders including the construction of fish measuring boards are handled by VIMS.

VIMS also periodically conducts tag retention field trials to evaluate whether changes might be warranted regarding the type of tag used for a specific species. Depending on the size range of fish, certain tags are more appropriate for small fish specimens (like the 2.5 in T-bar tag) versus large fish (plastic and stainless steel dart tags). For target species larger than 26-28 inches total length, the program recommends using a 6.25 in. stainless steel dart tag with wire core sheath.

Since 2008, select taggers have been testing dogleg dart tags (DD tags) and wide-anchor dart tags (DW tags) for improved retention in speckled trout and red drum. Tag retention studies continued in 2021 for these plastic dart tags to examine patterns of times at large (versus T-bar tags). Initial results suggest improved recapture rates with DW tags for speckled trout, the program's top-tagged species. Given the historical low recapture rate of speckled trout, and the impacts to the overall programmatic recapture rate, the expanded use of DW tags in speckled trout is encouraged.

2021 ACCOMPLISHMENTS

Tagging Effort and Recaptured Fish Results

Through 2021, the program's database included 385,531 tag records and approximately 38,063 recapture records (Table 2). *Note: VGFTP data referenced here include summaries of fish tagged and recaptured in terms of the number of *fish* recaptured (Table 1) and the *cumulative* number of *recaptures*, including multiple recaptures of the same fish (Table 2).

During 2021, 100 trained anglers tagged fish, a 25% increase from 2020. In March, the "Top Tagger" awards were presented in Hampton as part of the Bass Pro Shops' Spring Fishing Classic seminar series. Individual top tagger achievements were celebrated with excellent attendance. As usual, the 2021 top taggers were responsible for the majority of tagged and recaptured fish data last year. The VGFTP competition for the annual awards encourages taggers to work at becoming more consistent in their tagging. By doing so, they have a chance at making the list of annual award winners for any given year.

Sixty-three anglers tagged 25 or more fish during 2021; this accounted for about 99 percent of all fishes tagged in the year. Similarly, the majority (92%) of recaptures reported during the year were accounted for by the top 28 taggers. As expected, anglers tagging the most fish often have the highest number of recaptures per year. Higher numbers of recaptures are associated with a number of variables including fishing (and tagging) frequently, organizing one's tags and data sheets to enhance tagging efficiency, and tagging at locations which hold individual fish for significant periods and which are fished frequently by other anglers. This participation level is similar to 2020. These anglers' consistent efforts produce the majority of data on local and regional habitat use and movement patterns of target species.

The range of fishing/tagging areas covered by VGFTP volunteers is important to keeping the program data relevant to target species dynamics including year-to-year abundance, habitat use and seasonal migration patterns. However, also important are a smaller number of taggers who routinely challenge themselves to even higher tagging goals (200-900+ fish per year). The teamwork and cumulative data resulting from taggers at each tagging effort level keep the program responsive to changes in Virginia's recreational fishery. Multiple recaptures of individual fish often occur at fishing piers or other sites that hold fish for extended periods (this is often the case with black sea bass, flounder, etc.). Multiple recaptures of black sea bass at fishing piers demonstrate that careful handling of undersized fish results in reasonable survival rates of the fish. Another positive result of successful releases is such fish often contribute in the future to another good day of fishing. However, especially at fishing piers, the practice also contributes to the referenced problem of some inaccurate reporting of tagged fish recaptures. Further, demand for recapture rewards at these sites can be challenging during certain periods of time and provide pressure in terms of maintaining stock and ensuring that the reported data are accurate. Sometimes, anglers requesting multiple rewards may need to be given a limited option of rewards in fairness to all program participants and to ensure consistent reward stock.

2021 Species Results

Black Drum:

In 2021, 266 black drum were tagged, of which 24.8% were adult fish (>16 inches TL). The recapture rate in 2021 was approximately 8.3% (n=21).

From 1995-2021, 5,398 black drum tags and 331 recaptures were reported

(TbIs. 1, 2, pp. 38,39), for an overall recapture rate of 6.1%. The most popular tagging site in 2021 was Owls Creek (n=145); this site made up 54.5% of tagging effort (Tbl. 3). This differs from 1995-2020, where the peak tagging site was Inner Middle Ground Shoal (13% of effort). In 2021, black drum recaptures were highest Owls Creek (n=14). Historically, Owl's Creek was also the top recapture site (24.3% of recaptures, 1995-2020). Tagged black drum ranged from 6-49 inches TL with a peak tagging effort at 9 inches TL (n=31 tags/size) (Fig. 1). Days at large for black drum ranged from 0 to 121 days for recaptures.

Tbl. 4 Black Drum Recapture Sites, 2021

Location	Number of black drum recaptures
Owls Creek	14
Rudee Inlet	4
Monitor Merrimac Bridge-Tunnel	2
Bluefish Rock	1

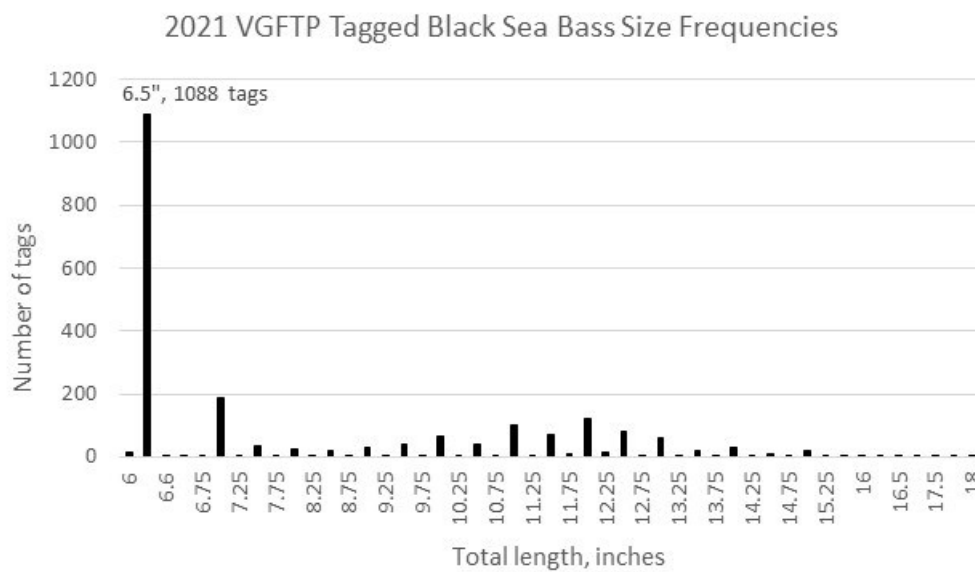

Black Sea Bass:

In 2021, 2,150 black sea bass tags were reported. To better manage program resources, a minimum tagging size limit of 6.5 inches was implemented in 2010. Even with this size limit in place, black sea bass continued to have a high species recapture rate in 2021 at 21.7% (Tbl. 2).

Black sea bass long-term results (1997-2021) show more than 46,907 fish tags and 11,481 recapture records (overall recapture rate = 24.5%, Tbls. 1, 2). The top tagging site in 2021 was Fort Monroe Area/Pier which made up 44.2% of the tagging effort (Tbl. 5). Fort Monroe was also at the top of the list for tagging of black sea bass from 1997-2020. For recaptures, 55.5% took place at Fort Monroe (Tbl. 6), and Fort Monroe has been the top recapture site in the past (1997-2020). Black sea bass are protogynous hermaphrodites: females mature around 7 inches TL and transition into males, which mature around 9 inches TL; 39.4% of tagged black sea bass in 2021 were >7 inches TL. Tagged black sea bass ranged in size from 6-18 inches TL, with 6.5 inch fish at the peak (n=1,088) (Fig. 2). These results are similar to the overall program pattern seen from 1997-2020, when peak effort occurred at 6.5 inches TL (n=14,280 tags). Recapture data for days at large ranged from 0 to 756 days and included fish that were tagged in 2019 (n=5), 2020 (n=22) and 2021. The highest number of recaptures came from black sea bass that were tagged in 2021 (n=440). (Note: recapture data in this report include multiple recaptures of the same fish and data for days at large include recaptures of fish tagged in previous years).

Cobia:

In 2021, 414 cobia tags were reported, of which 93.7% were adult fish (>24 inches TL). The 2021 recapture rate for cobia was 27%.

The total number of cobia tags from 1995-2021 was 6,695, with 1,026 recaptures and an 15.3% recapture rate (Tbl. 2). The most popular tagging location in 2021 was the York Spit CY Buoy (73 tags, 17.6% of effort, Tbl. 11). From 1995-2020, the top tagging site was the Baltimore Channel Buoy Line (12% of historical effort). In 2021, recaptures were highest at the CBBT, 4th Island with 10 recaptures (Tbl. 8). Tagged cobia ranged in size from 10-59 inches TL, and the peak length was 38 inches in 2021 (n=34, Fig. 3). This is slightly higher than tagging size frequencies from 1995-2020, where peak effort occurred at 36 inches TL (n=355). Cobia recapture data for days at large ranged from 1 to 2,265 days and included fish that were tagged in 2015 (n=1), 2016 (n=1), 2017 (n=2), 2018 (n=11), 2019 (n=31), 2020 (n=33), and 2021 (n=29).

Flounder:

In 2021, approximately 2,266 flounder tags and 367 recaptures were reported (Tbl. 2). From 2000-2021, 88,614 tags and 9,811 recaptures have been reported for flounder (Tbl. 2), with an overall recapture rate of 11.1%. In 2021, the top tagging site was Rudee Inlet (30% of effort, Tbl. 9), and the top recapture site was Ft. Monroe making up 43.4% of recaptures (Tbl. 10). Historically, the Gloucester Point Fishing Pier was the top tagging (14.4% of effort) and recapture location (n=1,613 recaptures) for summer flounder from 2000-2021. In 2021, tagged flounder varied in size from 9.5-21 inches TL, with the peak size for tagging at 12 inches TL (n=796) (Fig. 4). This peak could be a reflection of the 12 inch minimum tagging size guidelines put in place in 2010. The majority of flounder tagged in 2021 were adults (>11" TL). Days at large for flounder recaptures ranged from 0 to 683 days (including fish tagged in 2019 (n=1), 2020 (n=15), and 2021, with the most recaptures from fish tagged in 2021 (n=351).

Red drum:

In 2021, 2,291 red drum tags were reported and there were 262 recaptures (Tbl. 2). From 1995-2021, more than 69,591 red drum tags and 7,544 recapture records were reported for an overall recapture rate of 10.8 (Tbl. 2). The top tagging site in 2021 was Plantation Creek (194 tags, 8.5% of effort, Tbl. 11); with Rudee Inlet as the top recapture site (Tbl. 12). From 1995-2021 the York River Hot Ditch was the top red drum tagging and recapture site (11,334 tags and 1,171 recaptures). In 2021, tagged red drum ranged in size from 7-51 inches TL, with the peak size for tagging at 16 inches TL (n=183) (Fig. 5) and 43.6% (n=998) were adults (>18 in. TL). Historical patterns from 1995-2021 showed effort peaked at 15 inches TL (n=4,442 tags). Days at large for recaptures of red drum ranged from 0 to 3,185 days; one fish was tagged in 2012; 16 were tagged in 2019; 110 were tagged in 2020 and 135 were tagged in 2021.

Sheepshead:

In 2021, 197 sheepshead tags and 14 recaptures were reported (Tbl. 2). This was the highest tagging effort the program has had since 2009. From 2000 to 2021 there were 1,620 sheepshead tags and 102 recaptures (Tbl. 2). The top tagging site in 2021 was Owls Creek, with 81.7% of total effort (Tbl. 13). This differs from 2000-2021 results, where the York River Hot Ditch was the top tagging location (32.7% of effort). All sheepshead recaptures in 2021 also took place in Owls Creek. In 2021, tagged sheepshead ranged in size from 5-27 inches TL; with 14.2% adult fish (>14" TL). There was a peak in effort at 7 and 7.5 inches TL (n=32 tags/ea., Fig. 6). This pattern differed from 2000-2021 size frequencies, where peak effort occurred at the 15 inch size class (n=4,442). Days at large for recaptures of sheepshead ranged from 1 to 30 days.

Spadefish:

There were 200 spadefish tagged in 2021 and 29 recaptures (Tbl. 2). There were over 7,726 spadefish tags and 780 recaptures reported over the past 26 years, for an overall recapture rate of 10.1% (Tbl. 2). The most popular tagging location in 2021 was the Chesapeake Light Tower (26% of tagging, Tbl. 14). This followed results from 1995-2021 as the Chesapeake Light Tower was the top tagging and recapture site (28.8% of tagging, 32.8% of recaptures). However, the top spadefish recapture sites in 2021 were split among three sites: Anglo African Wreck, Chesapeake Light Tower and York Spit (n=5/ea.). In 2021, tagged spadefish ranged in size from 6-18.75 inches TL with peak effort at 9 inches TL (n=17) (Fig. 7). All of the tagged spadefish were within the mature size range (>4 in. TL). Fish were at large from 0 to 347 days. One recaptured fish was tagged in 2020 and the rest were tagged in 2021 (n=28).

Speckled trout:

From 1995-2021, more than 133,885 speckled trout tags and 3,060 recaptures were reported (2.3% overall recapture rate) (Tbl. 2). In 2021, there were 10,362 tags and 121 recaptures reported; Fort Monroe was the top tagging site (36.6% of effort, Tbl. 16). In terms of recaptures, the highest effort also took place at Ft. Monroe (n=7, Tbl. 17). Historically, Ft. Monroe was the top tagging site (n=22,660); the top recapture site was the York River Hot Ditch (n=629) from 1995-2021. In 2021, tagged speckled trout ranged in size from 5-31.5 inches TL, with a peak at 11 inches TL (n=2,219) (Fig. 8); 30.9% of tagged fish were adults (>12" TL). Peak effort from 1995-2021 also took place at the 11 inch size class (n=1,623). Fish recaptured in 2021 were at large from 0 to 434 days; of these, 16 were tagged in 2020, and 105 were tagged in 2021.

Tautog:

Through 2021, tagging effort on tautog has resulted in more than 23,258 tags (Tbl. 2). From this effort, there have been 3,521 recaptures (Tbl. 2) with an overall recapture rate of 15.1%. In 2021 alone, there were 916 tags and 130 recaptures. The top tagging site in 2021 was the Blackfish Banks/Reef (9.9% of tags, Tbl. 18). The top recapture site was Monroe Wreck (n=12, 9.2% of recaptures, Tbl. 19). This differed from 1995-2021, when the Chesapeake Bay Bridge Tunnel Fourth Island was the top tagging site (n=1,552 tags) and the Cape Henry Wreck was the top recapture site (322 tags). In 2021, tagged tautog ranged in size from 6.5-26 inches TL, with the peak at 14 inches (n=95 tags, Fig. 9); 81.3% of tagged tautog were adults (>11.5" TL). Peak effort from 1995-2020 also took place at a similar size class (13 inches, n=2,377 tags). Tautog recapture data for days at large ranged from 3 to 3,107 days (including fish tagged in 2013 (n=1), 2015 (n=1), 2016 (n=4), 2017 (n=4), 2018 (n=8), 2019 (n=15), 2020 (n=26), and 2021 (n=60). The VGFTP nearly had a new record for days at large, when a tautog tag that had been at large for 6,236 days was reported; but the tag was found washed up on a beach so there was no validation for the tagged fish itself.

Chincoteague Channel	2		

(Gray) Triggerfish:

During 2021 there were 127 gray triggerfish tags, and 34 recaptures (Tbl. 2). There were 1,837 triggerfish tags and 407 recaptures from 2001-2021 (Tbl. 2). Triggerfish had a high historical recapture rate of 22.2%. The top tagging location in 2021 was Off VA Beach midshore waters (39.4% of effort, Tbl. 20). In previous years (2001-2020), False Cape was the top tagging site, (15.3% of effort). The highest number of recaptures in 2021 took place at the Anglo-African Wreck (n=9, Tbl. 21). Tagged triggerfish ranged in size from 9-19 inches TL, with the peak effort at 14 inches (n=18, Fig. 10); all fish were mature (>7.2" TL). Historically, peak effort from 2001-2021 took place at the 13 inch TL size class (n=177 tags). Days at large ranged from 0 to 75 days.

CBBT, 1st Island	1
Triangle Wreck	1
Unidentified Wrk,Off Va. Bch, midshore	1

CONCLUSION

In 2021, the Tagging Program had a 9.8% decrease in the overall tagging effort (n=19,189 tags) and a slight increase in recaptures (n=1,557, .32% increase) from the previous year (Tbl. 2). Species with an increase in tagging included flounder (n=2,266 tags, 367 recaptures); sheepshead (n=197 tags, 14 recaptures); spadefish (n=200 tags, 29 recaptures); tautog (n=916 tags, 130 recaptures; Tbl. 1) and triggerfish (n=127 tags, 34 recaptures, Tbl. 1). Species that had lower tagging numbers in 2021 included black drum (n=266 tags, 21 recaptures); black sea bass (n=2,150 tags, 467 recaptures); cobia (n=414 tags, 112 recaptures); red drum (n=2,291 tags, 262 recaptures); and speckled trout (n=10,362 tags, 121 recaptures).

In 2021, the VGFTP conducted a three “Rs” study to evaluate program recruitment, retention and rewards with retired and active taggers to get feedback about their volunteer experience. The majority of both retired and active volunteers rated their experience positively (84.6%, 88.4% respectively), felt satisfied after volunteering, and would recommend the VGFTP to family and friends. Although the majority of volunteers felt valued by the VGFTP (61.5% and 74.4%), we collected some great feedback and ideas for improving the VGFTP volunteer experience. Some of the most feasible suggestions included creating a full-color target species i.d. guide to complement the current line drawing poster; provide more opportunities to interact with other volunteers; include a VGFTP pamphlet to go out with recapture reports, and send more updates from program staff about the VGFTP. VGFTP staff took these suggestions on board, and prepared a special holiday newsletter in 2021. They also created a VGFTP promotional handout to accompany all recapture reports that are sent to anglers and are in the process of drafting the full-color species guide. Improvements are also underway to the VGFTP website, to make the volunteer sign-up process easily understood and provide more materials for existing volunteers. The program is also promoted often within social media, which has been improved with the growing exposure of the VGFTP Facebook page (@vgamefishtagging).

Tagged triggerfish.
© Capt. Alex Perez

Other program successes in 2021 included significant increases in tagging effort for sheepshead and triggerfish, two species which had low historical effort. In 2021, speckled trout led again as the top tagged species, making up 54% of tagging effort. Although adding significantly to the overall tagging numbers, the lower recapture rate of this species has an impact on the overall recapture rate for the program. In response, the VGFTP is expanding the use of experimental dart tags; these tags have an improved recapture rate over the standard T-bar tags.

Overall, VGFTP data provide movement and site-fidelity patterns of fishes captured and released in Chesapeake Bay and Atlantic coastal waters and serve as an important source of information for marine fisheries management. In the past 26 years, more than 550 taggers have been trained and participated in the program and fishing effort has been documented at over 900 locations in Virginia waters.

Figure data in this report are accurate as of April 25, 2022. Future analysis of long-term trends in the VGFTP data will continue with the most recent results available online: <http://www.vims.edu/vgftp/>. This report is considered a “living” document with updated versions posted at the website above.

This report accounts for double tagging and counts the number of fish that were tagged and not the number of tags. Double tag info is valid for 2008 and after. For recaptures, this report counts the number of fish recaptured and does **not** count multiple recaptures of the same fish. The first column under each species is the number of recaptured fish and the second column is the number of tagged fish.

*This table also includes 190 cobia and 199 spadefish that were tagged as part of a special cooperative study with the Virginia Tech Virginia Seafood Agriculture Research and Extension Center in 2012.

Table 2. VGFTP Total Number of Tags and Overall Recapture Rates (1995-2021).

For recaptures, this table counts the total number of recaptures, including recaptures of the same fish. The first column under each species is the number of recaptured fish and the second column is the number of tags. These counts have been quality-controlled and any quarantined records have been removed from the final tag and recapture counts. *This table also includes 190 cobia and 199 spadefish that were tagged as part of a special cooperative study with the Virginia Tech Virginia Seafood Agriculture Research and Extension Center in 2012.

Appendix D:

2021 Tag Recaptures by Species

1. Multiple recaptures are distinguished **in bold** for individual fish by the records having IDENTICAL Tag Numbers and Tag Dates. *Note: abbreviated tag numbers are shown in this Appendix.
2. Multiple recaptures are listed in sequential order, with the most recent recapture listed last on the Tag Number column. Multiple recaptures often document the location of the fish over two different or distinct times. However, two (or more) recaptures of the same tagged fish can occur on the same day and even the same location. These types of events document good tagging and release survival rates for the species.
3. Multiple recapture data provide especially valuable information. This information can only be recorded when anglers write down and report the tag number as soon as possible, then release the fish with the tag still in place.
